Avian Influenza Update

We have attempted to keep members apprised of events developing in the states within the Mississippi Flyway where Avian Influenza is present and in neighboring states of the Flyway. Events are changing and the state veterinarians are posting updates frequently. Some are not as forthcoming with information.

In the past, the AU has worked with USDA and studies have been conducted that illustrate pigeons are not susceptible to Avian Influenza. We do not suggest pigeons are defined as poultry. They are not. However, the state vets have the authority to implement protocol they deem necessary to protect their poultry industry.

To date, approximately 46 million chickens and turkeys have been destroyed and 30 countries will not allow our poultry products, which is devastating to the poultry industry.

States within the Mississippi Flyway are [Alabama](#), [Arkansas](#), [Indiana](#), [Illinois](#), [Iowa](#), [Kentucky](#), [Louisiana](#), [Michigan](#), [Minnesota](#), [Mississippi](#), [Missouri](#), [Ohio](#), [Tennessee](#), [Wisconsin](#), and the Canadian provinces of [Saskatchewan](#), [Manitoba](#) and [Ontario](#).

Though not in the Flyway, we understand they are allowing movement in [Kansas](#).

The state of [Michigan](#) Department of Agriculture has announced a confirmed case of Avian Influenza detected in geese. They had a precautionary ban on shows and events where birds were co-mingled with other birds in an effort to prevent the virus from infecting Michigan flocks. Similar to [Ohio](#), individual members may train their birds within the state. We are told birds should not be basketed together for training, rather individually.

The state vet in [Iowa](#) has indicated they also have a ban on movement, shows,

and other events where birds are co-mingled with other birds.

In [Illinois](#), there have been no cases detected, they indicate racing is ok, however, members need to be aware of the protocols in place in the states they travel through and from where the birds will be liberated.

The [Wisconsin](#) site reports that they have lifted their quarantine zones. They do have a ban on movement to swap meets and open shows that are not affiliated with the county or state fairs.

In [Missouri](#), the state vet has recently said they are not allowing birds in from other states. They consider any gathering of birds as exhibition and disallowing.

[North Carolina](#) (follow link for press release) has suspended shows through the end of 2015.

[Pennsylvania](#) (follow link for press release) has suspended shows through the end of 2015.

[Kentucky](#) (follow link for press release) is allowing in-state bird activity only - nothing coming into the state and nothing leaving the state.

Most of this information is what had been previously reported, however, some states have had events occur and changes have been made.

Vets from our Scientific Taskforce were involved and working with us very early on participating in our initial calls with the USDA and continue to work with us.

We cannot stress enough the importance of members monitoring their individual sites as changes are being made often.

We will continue to send out alerts as we receive information or new developments occur.

This is important! If you are aware of someone in the affected areas, please forward or print and share this message.

AU Bio-Security Recommendations

Basic bio-security measures should always be used. It is more important than ever to make sure you are cleaning your loft regularly, washing hands going in and out of the loft, monitoring or perhaps restricting others from going in and out of your loft and placing new birds in a quarantine section before integrating them with your other birds.

Several years ago, former board members, Tommy Erskine and Dr. Gary Braden, developed bio-security measures for AU members to follow. Subsequently, this document was reviewed by the USDA. The USDA indicated the bio-security measures presented were a great model for AU members to follow.

AU Bio-Security Recommendations are found at <http://pigeon.org/biosecurity.htm>

Other Ways You Can Help

The AU also developed the Loft Certification Program many years ago. We have encouraged members to participate in this self-regulating program to illustrate optimum care is provided the birds. It is achieved through a point system and is based on practicing basic bio-security. The [AU Loft Certification Program](#) doesn't cost anything. For more information, please feel free to call the national office (800-755-2778).
